

UNITED CIVILIZATIONS CITIZENS ASSEMBLY

GLOBAL DIALOGUE FOUNDATION INITIATIVE

INTRODUCTION

From a scientific point of view, it is well-known that all living beings who were once “One”, i.e., originating from a common ancestry, can and will change their appearance over time. In other words, their DNA will mutate - mainly in order to respond to new challenges, and to survive. Over time, this can and will lead to developing different species than those which have been present for centuries, or eons. Although they shared the same ancestors, they’re extremely different and this applies to just about all living beings, everywhere.

From the beginning, people were hunters and gatherers. They migrated while looking for a better environment and an easier lifestyle. So, migration is a natural part of being human - going to different parts of the world. Over time, settling and adapting to a new environment, new climate, new way of life. This also includes eating, sleeping, wearing clothes from other origins, etc. So, mutation in their DNA had started and later, their appearance and everything was different compared to the way it was centuries earlier... With time, this became the norm.

But, because of a lack of knowledge, people looked towards each other as different types of humans - e.g., as enemies of each other. Sometimes, without any reason, but to demonstrate their strength and insist on who is in charge of their territory.

This course has been following humans all the way through time, even until now. But, thanks to science, and religions-who were the gate-keepers of morals, ethics, knowledge, health, etc., until science arrived, we have the knowledge and ability to share and see each other as equals and operate with equal opportunity for everything and everywhere. E.g., for progress inhabiting the world with respect towards each other - not just tolerance, which is very different. Respect comes out of knowing each other, tolerance and trust, and living as good neighbours. Simply stated..., if there is a fire in the neighbourhood, it will also affect the others.

The above was explained from a scientific point of view, but also from everyday life which is close to everyone. So, everyone can make friends and respect each other. This is the future. Our future, with dialogue towards universal, inclusive society. Universal brotherhood. On the contrary is destruction, terror and the end of everything and all forever.

So, where there is dialogue, there is peace. Where there is peace there is culture. Where there is culture, there is progress. It's time to go together, towards the long long longing goal - Peace, Harmony, Progress, Respect..., Simply Universal Brotherhood of Man on Earth.

MAIN GOALS

United Civilizations - Citizens Assembly Initiative is a part of GDF, therefore in close relation with everything in GDF and Unity in Diversity, etc., Although they goals will expand in the future according to the needs of the new time and the members, i.e., the global community, they are now concentrated on:

1- World Civil Society-Universal Dialogue-GDF Sectors

PS:

To clarify the above statements, we are enclosing the latest findings/ news, regarding changes in DNA. The following two links are about twin brothers. One is an astronaut and was in space for a year, while the other was on Earth. On his return from space, NASA scientists found that Kelly's DNA had been altered upon his return to earth — with 7 per cent of his genes experiencing an “unexpected change,” So DNA is changing - as a fact.
